## CALYPSO WATERPROOF TESTER

Use this wet test after any repairs to ensure water tightness.

**OFFER**

### Special Discounted Price during MAY only

#### Instructions for use

- 1 Fill the cylinder with water upto the red line.
- 2 Hang the watch on the hook, out of the water and screw on the lid tightly.
- 3 Be sure that the hook is in the position completely out of the water.
- 4 Turn fully the air-releasing valve
- 5 Increase pressure with the lever, pumping up to any given pressure (1, 2, 3, 4, 5, 6, etc) atmospheres, corresponding to water pressure at 10, 20, 30, 40, 50 60, metres depth)
- 6 Immerse the watch into the water, pushing down completely the knob of the central stem.
- 7 Release air pressure gradually by turning the valve
- 8 If the watch is not perfectly water-tight series of bubbles will emerge where the water tightness is incomplete (eg round the crown, glass, back of the case).
- 9 Please note some bubbles may also appear on the external turning bezel, or the crown – even on the best waterproof watch – this is not a defect, but a little residual external air.
- 10 Take out the watch before the indicator reaches zero.

W426 Calypso Tester Normally £425.00 ea less 10% = just £382.50 ea **Hurry, only while stocks last!**

### BURR LIFE

Good for diamond tools. **B953 Burr Life £5.75 ea**

This amazing product in a handy stick dispenser is a unique lubricant for use with burrs, drills, gravers, saw blades etc to reduce pull & drag. It will add life to your tools by reducing friction & is much cheaper and easier to use than messy oils. The non petroleum formula also helps prevent burr chatter and ensures a smooth, even stone seat on your settings.
